Engineering & Manufacturing

***Modernization of 2-line
ice cream dosing line***

Modernization:

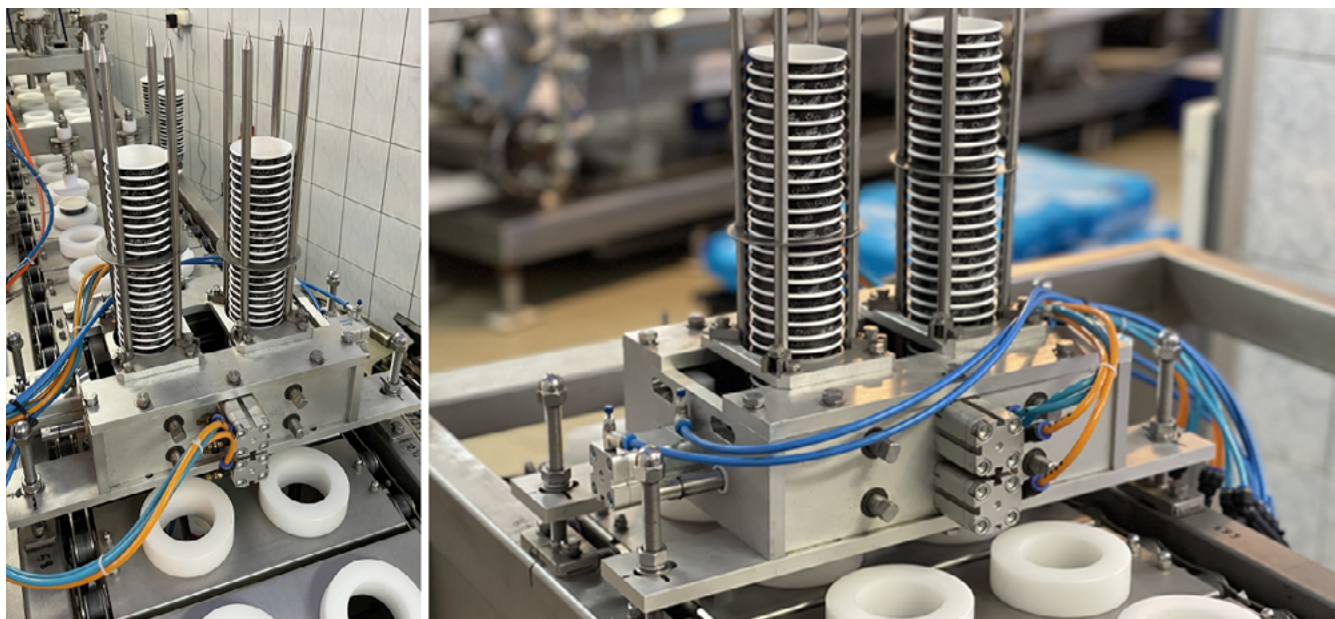

- Ice cream dosing nozzles with the possibility of introducing viscous fillers (2 sets) are manufactured and installed;
- The automatic cup feeding unit has been upgraded (2 sets);
- The lid feeder has been upgraded (1 set).

Modernization of 2-line ice cream dosing line

Modernization of the automatic cup feeding unit made it possible to work on two standard sizes of containers with minimal time spent on re-equipment. When switching to a new cup size, it is first pre-separated from the stack, and only then the removal and installation of the cup in a certain position.

The ice cream dosing unit consists of a set of 2 nozzles with the possibility of introducing viscous fillers (syrup, jam, etc.).

This product can be manufactured according to the technical specifications of the customer, taking into account its predetermined parameters and features.

Full cycle engineering services

Food Machinery

Machinery for tires, rubber, plastics manufacturing

Machinery for the chemical and oil and gas industry

Machinery for the perfumery and cosmetic industry

Modernization and automation of production

Non-standart equipment

Production of spare parts, components, assemblies

Outsourcing services - repair and maintenance of equipment
