*Engineering & Manufacturing*

*Equipment for cutting  
cheese, butter and  
other plastic products*

The equipment is designed for cutting cheese, butter and other plastic products in the food industry.

It can be equipped with a pneumatic drive and an automatic feeding device for product layers.

Roller supports for easy positioning.

It is possible to replace the table top and cut the product in other sizes.

Cutting the product using the «String» device with adjustable tension.  
A slot on the table for easy cutting into the same shape.

The equipment provides an even cut of a layer of cheese, butter and other plastic products using an adjustable stop.

All elements are made of food grade stainless steel.

This product can be manufactured according to the technical specifications of the customer, taking into account its predetermined parameters and features.
