***Belt weigher
(Model VPM)***

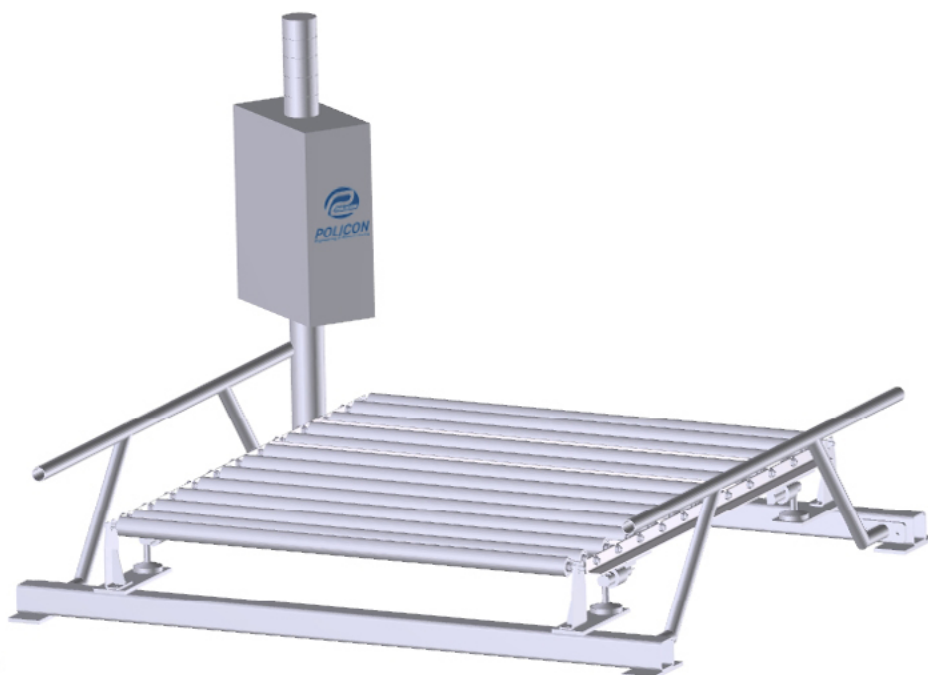

Belt weigher (Model VPM)

Belt weigher is designed to accurately measure the weight of the material moving along the conveyor (extruded tread, chamber sleeve, etc.).

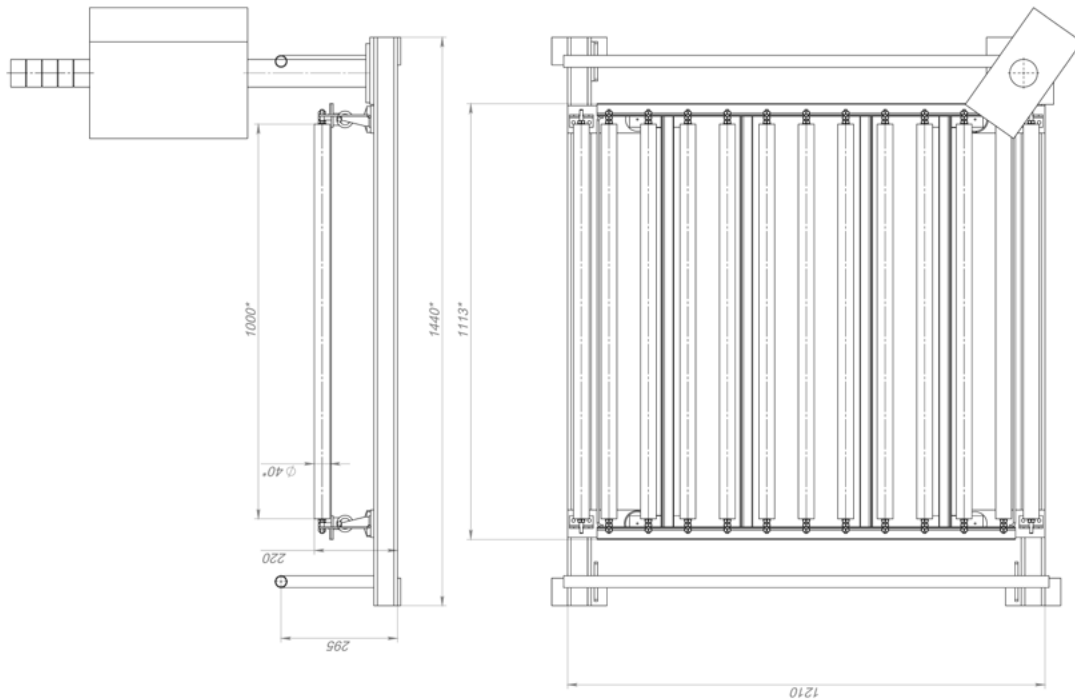

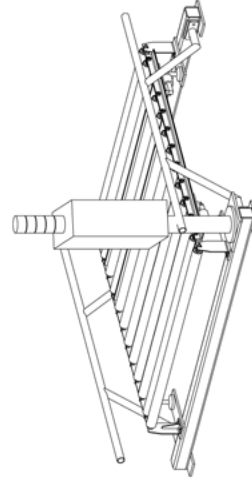

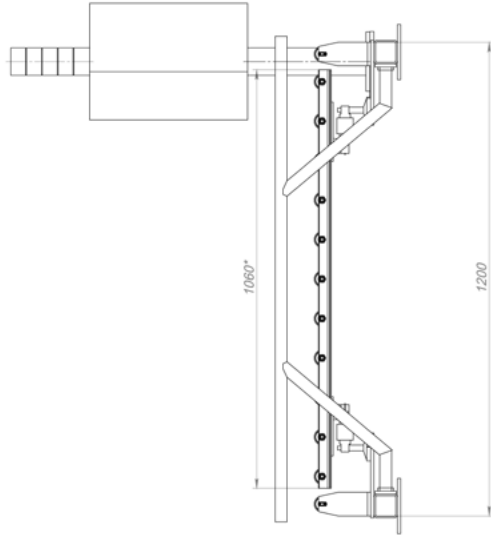

Features:

- light weight detection alarm
- control system based on a programmable controller.
- weighing with the weight sensors of the company «NVM».

Belt weigher (Model VPM)

Technical Specification:

| | |
|---|---|
| Type of scale | stationary, roller conveyor scales, strain gauges |
| The maximum width of the materials to be weighed, mm | 900 |
| The smallest thickness of the materials to be weighed, mm | 5 |
| Maximum weighing limit, kg | 30 |
| The smallest weighing limit, kg | 0,5 |
| Absolute error of weight measurement, kg | 0,015 |
| Power supply: | |
| voltage, V | 220 |
| frequency, Hz | 50 |
| Overall dimensions, mm, no more | |
| length | 1 210 |
| width | 1440 |
| height | 950 |

This product can be manufactured according to the technical specifications of the customer, taking into account its predetermined parameters and features.

Full cycle engineering services

Food Machinery

Machinery for tires, rubber, plastics manufacturing

Machinery for the chemical and oil and gas industry

Machinery for the perfumery and cosmetic industry

Modernization and automation of production

Non-standart equipment

Production of spare parts, components, assemblies

Outsourcing services - repair and maintenance of equipment
